

Whitepaper

What Is Ascend?

Our mission is to revolutionize the crypto analytics and utility space, providing comprehensive tools and services that empower investors, traders and enthusiasts to make informed decisions and maximize their profits - **all in one platform.**

**Advanced Contract
& Wallet Analysis**

**Mixer and Cross-
Chain Swapper**

Dust Cleaner

Sniper

Multisender

+ More

Our Mission

Our aim in this project is to produce a one stop shop for traders and developers, by producing a range of utilities that enable smooth sailing for project developers, avoiding snipers and MEVs. We also aim to make life much simpler for everyone all around in the Defi ecosystem.

Our fundamental ethos is the right to anonymity and privacy, so we have been aiming to build support for every single functionality a CEX has in a truly anonymous method.

Our Team

We have an extremely versatile team which has worked on a plethora of projects ranging from MBS to CAI and have **exceeded 100M mcap** before.

We have a team of experienced developers that ensure all of our products undergo constant maintenance and ensure we constantly have top of the line projects.

We've also recently contracted a social media manager that is keeping our Twitter in constant update.

Managers

Developers

Marketers

Utility Bot 1

Ascend Mixer

We have produced a mixer that is usable via Telegram and WebApp.

The purpose and usage of a mixer is to allow users to have true control of their finances and also have complete range of freedom to do as they want with the currency unsurveilled and unmonitored.

A mixer also allows users to obscure the origin of their funds to prevent scams and other untoward behaviour from occurring towards them as a mixer obfuscates your source of origin.

It can also allow you to donate to charities and other causes when you are in certain countries that are against such actions, a good example would be Vitalik using TC to donate to the Ukraine cause. It allows you to have true freedom to spend and do as you please.

Utility Bot 2

Ascend Swap

Ascend Swap is a tool that allows users to buy and sell tokens and swap between tokens.

We have added the ability to simplistically swap between ETH and BNB with some users reporting latency as low as 3 minutes.

Through this we are able to allow users to swap between a massive myriad of currencies. This is the first stage in our solution to a truly anonymous Hub for users.

Utility Bot 3

Ascend Staking

Users will be able to stake Ascend tokens for a share of the revenue. Ascend earns from our utilities.

This rewards users for not selling and massively decreases potential sell pressure down the line, it does this by rewarding users in ETH rather than Ascend tokens - so unlike traditional staking, we do not add additional sell pressure.

Utility Bot 4

Ascend Dashboard

Within our Dashboard, we will provide an AI analysis of wallets and smart contracts. These advanced analytics will include key components of your trading strategy and allow you to see points you could improve on.

For example:

- Are you selling too fast?
- Should you TWAP out over a longer time period?
- Should you exit at an earlier stage?

It will also provide analytics on a given CA's volume and give you key stats on the larger holders as well as their interactions with it.

Utility Bot 5

Ascend Sniper

We are currently building our own sniper which will support multiple chains and allow users to snipe against methods, after tax decreases, give warnings on blacklists and auto detect blockdelays to ensure smooth handling for users.

We will also be implementing all of the features competitors have, and much more.

Utility Bot 6

Ascend Portfolio

We will allow users to connect a list of their accounts so they can view live balance for all of their balances after tax and price impact is taken into account, this allows you to have a clear non-complicated idea of your tokens and their values.

We will also allow smooth and seamless buying and selling from this platform.

Utility Bot 7

Ascend Multisniper

We have produced a token airdropper that works in a significantly more gas-efficient way than any of our competitors. It allows users to achieve as prices as low as 0.1ETH for 101 transfers while gas is relatively high against usual market conditions.

This airdropper also allows you to import holders from any contract at all.

Revenue Share

Revenue

The revenue generated will be split between stakers and buybacks at a ratio of 70:30

This allows all holders to benefit from our utilities but gives priority to stakers that are helping to decrease sell pressure.

Partnerships

We have also begun building partnerships with several large companies that we will integrate within the Web App, which will allow users to do everything they need from getting Uber and hotel gift cards with any of their crypto, to sniping the latest coins.

Our End Goal

As we move forward, Ascend is committed to continuous improvement, incorporating user feedback, and staying ahead of market trends. We will continue to expand our services, explore new utility opportunities, and build strong partnerships to strengthen our position as a leading crypto analytics and utility platform.

We invite you to join us on this exciting journey as we revolutionize the crypto landscape, providing cutting-edge solutions and unmatched value to our users. Together, let's Ascend to new heights in the world of cryptocurrency!
